01 ABOUT US

We design and produce containers of refined, innovative design.

Products designed to transport, preserve, and protect, to high quality standards, with an attractive appearance, good for the environment.

We have been doing this for over forty years, consolidating our knowledge of the manufacture of plastic packaging for fresh produce.

We have obtained certification for our products and management systems. Interaction with a number of important produce growers and industries, on the national and international scales, with varying expectations, ensures that we constantly receive feedback allowing us to anticipate and satisfy the demands of all our customers.

02 KEY POINTS

Investment in research and innovation.

We constantly invest in research and technological innovation to improve the efficiency of all our products and offer functional, well-made, customisable plastic packaging.

The meticulous care we take with design and our attention to the tiniest details make Plastica Sud packaging more than just containers, anticipating the most important demands of the sector. We work side-by-side with our customers, listening to what they need and making sure our plastic packaging contributes to the success of their products.

03 MISSION

**From tradition to
industry 4.0**

A passion for innovation and in-depth knowledge of the market, accompanied by constant investment and a team of highly qualified resources, represent the keys to the success of a company constantly oriented toward customer service.

Ongoing investment in technological innovation, a new **Industry 4.0** factory, lean manufacturing methods and cutting-edge products responding to the new demands of today's rapidly evolving produce market. We respond to the challenges of today with the latest new management techniques centring around planning, limiting stocks, and **process control**. **Ongoing improvement generates additional "value"**, which is transferred to customers with the packages, meaning **better products at the same cost**, with prompt delivery and effective management of **post-sales service**.

04 VALUES

Sustainability: not a single act, but an ongoing process.

A focus on sustainability is not a single act; it is an ongoing process, constantly updated, with an emphasis on innovation:

our crates are made of robust **100% recycled polypropylene (PP)** and high-density polyethylene (PE/HD), but we are constantly informed about applications of new materials and promising production techniques for further improving mechanical performance or reducing environmental impact.

The circular economy: a business model to aim for.

There is no such thing as “waste”. Every production process contains within it the seed of complete reuse of all resources.

Plastica Sud operates in this kind of circular economy, and our participation in **CO.N.I.P. – Consorzio Nazionale Imballaggi Plastica**, Italy’s national consortium of plastic packaging producers – indicates our commitment to use only crates made out of recycled materials supplied by consortium members on the basis of the principles of energy savings, versatility of use and simplicity of reuse.

05 OUR HISTORY

We've been building a road to the future for more than 40 years.

1979

Establishment of Plastica Sud

2008

New production plant in Sarno

2015

Start of plan for investment and development of Industry 4.0 technologies

2016

Consolidation of the company's presence on domestic and international markets

2022

EPD certification obtained

Our history demonstrates our constant commitment to innovation, quality and optimisation of use of resources. We're proud of the results we've achieved so far, and ready to face the challenges of the future and continue growing in the plastic packaging industry.

06 THE FIGURES

The power of figures: the roots of leadership

PRODUCTION AREA

42,000 m2, including
15,000 m2 of indoor space

PRODUCTION LINES

N° 12

PATENTED MOULDS

> 50

CRATES PRODUCED
PER YEAR

about 18 million

PHOTOVOLTAIC
INSTALLATION

power of 450 kWp.

TURNOVER IN Y2022

about € 11 M

WORKFORCE

40 employees

CUSTOMERS

800+

07 PRODUCTS

What you would design, if you were asked to do it.

Plastica Sud has expanded its range of crates over the years, from “use and collect” and “reusable” crates to the more recent “insertable” crates and crates with “collapsible walls”, long-lasting items that can be used over and over again.

This form of attention is expressed in the many forms of certification obtained by Plastica Sud, not only to comply with the law but to anticipate the new standards: this is the case of voluntary EPD certification, an Environmental Product Declaration taking into account environmental impact at all stages in the supply chain for production of our crates, destined primarily for the produce market.

08

CERTIFICATIONS

**Follow the rules today,
anticipate the standards
of the future.**
